

No R-Value Condensation Control Blanket

Formaldehyde-free™ Metal Building Insulation Blanket

Product Description

Condensation Control Blanket is a No R-value, unfaced insulation blanket composed of glass fibers bonded with JM's acrylic Formaldehyde-free™ binder system. The naturally white insulation wool reduces the irritation and dust associated with traditional fiber glass products.

Laminators apply appropriate facings to the blanket to provide an interior surface finish and vapor retarder.

Applications

No R-value Condensation Control Blanket is designed for installation under the roofs or inside walls of unconditioned post-frame or metal buildings used for storage or industrial processes where energy codes do not require a minimum insulation R-value. Under many weather conditions, it has been found that providing this minimal insulation treatment can reduce water vapor condensation against cold metal surfaces. Johns Manville makes no warranty that installing this product will adequately control condensation in all conditions.

Packaging

No R-Value Condensation Control Blanket is compression-packaged for savings in storage and freight costs.

Recommended storage and transport

Store insulation indoors. Keep insulation clean and dry at all times. When transporting, cover completely with a waterproof tarpaulin as necessary.

Specification Compliance

Thermal Performance: No specific value

ASTM E 136 Noncombustible

ASTM E 84 Flame Spread Classification of 25/50 or less for flame spread/smoke developed

ASTM C 991 Type I (no facing)
